RESEARCH INTELLIGENCE / PRODUCT OVERVIEW

ONCOFRONTIER

Find, compare and organize open oncology evidence.

A research discovery workspace for oncology researchers and evidence reviewers.

From a research question to a source-linked brief

Explore public biomedical literature and trial records, inspect their source details, then collect selected records into a structured research plan.

Accessibility modes cover blindness support, low vision, assisted hands, dyslexia, and comfortable display settings.

A FOUR-STEP DEMO

EGFR inhibitor resistance

Example question: lung cancer evidence

1. **Search**
   Enter the full research question in Evidence Search.
2. **Review**
   Compare available papers and trials; open the original source.
3. **Collect**
   Save useful records to the Research Planner.
4. **Share**
   Draft and download a structured Markdown brief with references.

PUBLIC SOURCES

Traceable evidence

Search and look up records across connected services:

- PubMed
- Europe PMC
- ClinicalTrials.gov
- Crossref
- OpenAlex
- Open Targets
- PubChem

Designed for research workflows

Filter by source and record type, check identifiers and links, and preserve citations in the planner export.

THE VALUE

Less time gathering links. More time asking the next research question.

ONCOFRONTIER helps users organize public evidence into a reviewable starting point; each record remains connected to its source.

Prototype scope

Research discovery only - not clinical decision support, diagnosis, or treatment advice. English, French, and Arabic have full interface translations; 16 more languages cover selected core text with English fallback for longer content. The Companion AI service needs an administrator-configured server key; public-source retrieval remains available where supported. Voice depends on the browser/device, and microphone input starts only after the user presses the microphone button. Sign-in and personal saved history require Supabase configuration. Molecular docking, ADMET prediction, de novo design, and email alerts are not implemented.
